

Employment rate: Breakdown by gender

Downloaded from <https://www.canterburywellbeing.org.nz/our-wellbeing/employment/employment-rate/#link-breakdown-by-gender> on 28/07/2024 3:54 AM

The figure shows noticeable differences between the female and male employment rate (non-seasonally adjusted) in greater Christchurch, following the beginning of the Canterbury earthquake sequence (employment rate for females falling from 61.8 percent in December 2010 to 54.5 percent in March 2012). This suggests that a greater proportion of females were adversely affected by the impact of the earthquakes on employment, compared with males. However, the employment rate for females appears to have recovered during the subsequent years, and has remained above pre-earthquake levels since late 2014. The approximately 10 percentage points difference between the male and female employment rates in greater Christchurch (75.1% male; 67.1% female, September 2022) is consistent with male and female employment rates for New Zealand overall (data not shown).

Data Sources for Employment rate

Source: Statistics New Zealand.

Survey/data set: Household Labour Force Survey to September 2022. Custom data request for greater Christchurch region.

Source data frequency: Quarterly.

Metadata for the Employment rate indicator is available at <https://www.canterburywellbeing.org.nz/index-data>
